

# **AI Water Accountability**

A Regenerative Legal Framework for Technological Impact Compensation

*Author: Austelio Mendoza*

*ARX DAO / Derecho Vivo DAO*

*Date: June 2025*

## EXECUTIVE SUMMARY

AI consumes water through energy-intensive data processing and cooling systems. While major companies commit to being Water Positive by 2030, current ESG models lack legally verifiable compensation.

This manifesto proposes a mechanism that transforms environmental class actions into water restoration projects, leveraging blockchain tokens (ARX), DAO fiduciary governance, and court-backed legitimacy.

Pilot Project: Apatlaco River Basin, Mexico. Legal suspension granted. ARX Token minted. 14 municipalities involved.

Seed Funding Requested: \$50,000-\$150,000 USD per project. Covers legal execution, DAO governance, token issuance, and public dashboards.
