

AI Water Accountability

A Regenerative Legal Framework for Technological Impact Compensation

Author: Austelio Mendoza

ARX DAO / Derecho Vivo DAO

Date: June 2025

Executive Summary

- AI consumes water
- Current ESG metrics lack legal traceability
- Our model: Class Action + ARX Tokens + DAO = Real-world compensation

The Challenge

- AI = energy = water
- Microsoft, OpenAI, Google under pressure
- Current methods (tree planting, donations) lack measurable, legal enforcement

The Legal-Technological Model

- Class action litigation
- Court resolutions, peritajes, suspensions
- Tokenization of legal impact
- DAO fiduciary multisig management

Pilot Project: Apatlaco River Basin

- Snapshot of environmental, legal, and social data
- Token ARX-A001 minted and live
- Suspension granted
- 14 municipalities involved

Partnership Opportunity

- Water-positive commitments need traceable impact
- This is legally enforceable, community-governed, and technologically scalable

Requested Action

- Seed Funding Proposal: \$50,000-\$150,000 USD/project
- Covers: Legal action execution, DAO governance + tooling, Token issuance + dashboards
